Brainstorming and Idea Prioritisation Template

Incident Lifecycle Automation in ServiceNow

1. Purpose

This template supports structured brainstorming and comparison of possible solutions for improving IT incident management in ServiceNow. It helps the project team identify useful ideas, evaluate their value, and select a practical approach for further analysis.

2. Problem area

IT incidents can be delayed or inconsistently handled when assignment, communication, knowledge reuse, and resolution tracking rely heavily on manual effort. The project explores how ServiceNow capabilities may help make the incident lifecycle more consistent and traceable.

3. Brainstorming prompts

- How can an incident be recorded with the information needed for support?
- How can incidents be categorized and prioritised consistently?
- How can incidents reach the appropriate support group more efficiently?
- How can users and support teams receive timely status updates?
- How can Knowledge Management help technicians reuse known solutions?
- How can incident records and resolution details support follow-up analysis?
- How can a related change be handled through the appropriate Change Management process when required?

4. Idea capture template

Use the blank table below to record ideas during a brainstorming session. Add rows as needed.

5. Idea prioritisation method

Score each idea from 1 (low) to 5 (high) for each criterion. Suggested criteria are user benefit, feasibility in ServiceNow, potential time savings, and alignment with the project scope. Multiply each score by its weight if weighted scoring is required. Scores are preliminary and should be validated during requirements analysis.

6. Suggested prioritisation criteria

User benefit — Does the idea make incident handling clearer or easier?

Feasibility — Can the idea reasonably be configured using available ServiceNow features and access?

Efficiency — Could it reduce repetitive manual steps or avoidable delays?

Scope fit — Does it directly support incident creation, assignment, tracking, resolution, or closure?

7. Initial candidate ideas

Standardise incident fields and categorisation.

Define a consistent approach for priority using impact and urgency.

Explore Flow Designer for appropriate notifications or assignment steps.

Use Business Rules where server-side record logic is needed.

Make relevant Knowledge articles easier for support staff to find.

Document how a related change is raised and managed when an incident requires a system change.

Use clear resolution notes and closure information.

8. Decision and next steps

Selected idea(s):

Reason for selection

Assumptions to validat

Owner / tea

Next step: Validate the selected ideas against stakeholder needs, platform capabilities, access permissions, and project requirements.

Idea capture

ID	Idea	Expected benefit	Effort / dependency	Notes
IDEA-01	IDEA-01	Consistent prioritization	Medium; ServiceNow configuration and testing	Recommended for initial implementation
IDEA-02	IDEA-02	Faster routing	Medium; ServiceNow configuration and testing	Recommended for initial implementation
IDEA-03	IDEA-03	Fewer missed SLA deadlines	Medium; ServiceNow configuration and testing	Recommended for initial implementation
IDEA-04	IDEA-04	Faster resolution	Medium; ServiceNow configuration and testing	Recommended for initial implementation
IDEA-05	IDEA-05	Better data quality	Medium; ServiceNow configuration and testing	Recommended for initial implementation

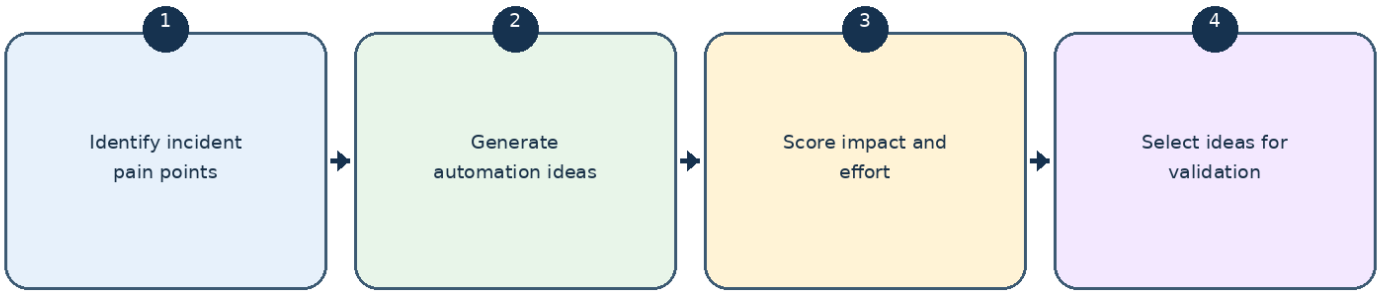

Prioritisation score (1 = low, 5 = high)

Idea	User benefit	Feasibility	Efficiency	Scope fit	Total
IDEA-01	Consistent prioritization	4/5	5/5	5/5	19/20
IDEA-02	Faster routing	4/5	5/5	5/5	19/20
IDEA-03	Fewer missed SLA deadlines	4/5	5/5	5/5	19/20
IDEA-04	Faster resolution	4/5	5/5	5/5	19/20
IDEA-05	Better data quality	4/5	5/5	5/5	19/20

Process Diagram
