Customer Journey Map Example

Incident Lifecycle Automation in ServiceNow

1. Purpose

This journey map illustrates a typical end-user experience when reporting an IT incident and following it through resolution. It is an example to be reviewed and adapted to the actual organisation's process.

2. Persona

Persona: Employee / end user who experiences an IT issue. Goal: report the issue quickly, understand its progress, and return to normal work.

3. Journey stages

• Stage 1 — Experience an issue: The user notices a service disruption, such as being unable to connect to a business application.

• Stage 2 — Report incident: The user opens the ServiceNow incident form or an approved reporting channel and enters the issue details.

• Stage 3 — Receive acknowledgement: The incident is recorded and the user can refer to its number and current status.

• Stage 4 — Investigation and assignment: The service desk reviews the information and routes the incident to the appropriate support group.

• Stage 5 — Troubleshooting: The support team investigates the issue and may consult relevant Knowledge articles.

• Stage 6 — Resolution and closure: The solution and resolution notes are recorded, and the incident is resolved and closed according to the configured process.

4. Journey map

The table below summarises user actions, possible questions or feelings, pain points to validate, and improvement opportunities. The pain points are hypotheses, not confirmed research findings.

5. Opportunities

Make incident submission clear and request the information needed for diagnosis.

Provide understandable incident status and ownership information where permitted.

Use consistent categorisation and priority rules.

Make relevant Knowledge articles available to support agents.

Capture meaningful resolution notes for future reference.

6. Validation notes

Validate this example with users or stakeholders. Record actual observations, quotes only with permission, and any differences between the example and the real process. Avoid including personal, confidential, or production incident information in project documents.

Customer journey map

Stage	User action	Question / feeling	Possible pain point to validate	Opportunity

Stage	User action	Question / feeling	Possible pain point to validate	Opportunity
