Acknowledgement

Thank the guide, institution, team and anyone who helped.

Abstract

One paragraph (150 to 250 words): the problem, the solution, the tools used, the results.

Table of Contents

Insert an automatic table of contents here after the report is finalised (Word: References > Table of Contents).

1. Introduction

Background on IT incident management and why automating the incident lifecycle matters.

2. Problem Statement

What went wrong with manual incident handling: slow routing, missed SLAs, repeated incidents, scattered knowledge.

3. Objectives

- Automate the incident lifecycle from creation to resolution using workflow automation.
- Integrate Knowledge Management to support faster resolution.
- Integrate Change Management to control fixes and minimise recurring incidents.
- Improve overall IT service efficiency.

4. Scope and Limitations

What the project covers and what it does not.

5. Technologies and Tools

List ServiceNow modules, Flow Designer, Business Rules, Notifications, SLA definitions, update sets and any other tools, with a line on why each was chosen.

6. System Design

Include the lifecycle diagram, data model (tables and key fields), roles, and the integration with Knowledge and Change Management.

7. Implementation

Describe how each part was built.

Component	What was built and how
Incident form and fields	
Business Rules	
Flow Designer flows	
Notifications and SLAs	

Component	What was built and how
Knowledge Management integration	
Change Management integration	
Reports and dashboards	

8. Testing

Summarise performance testing and user acceptance testing with the key numbers.

Test type	Result	Notes
Unit testing		
Performance testing		
User acceptance testing		

9. Results and Discussion

Compare before and after, with evidence.

Measure	Before	After	Change
Mean time to resolve			
SLA compliance			
Correct first assignment			
Incidents resolved with Knowledge article			
Recurring incidents			

10. Challenges and Solutions

Problems met during development and how they were solved.

11. Conclusion

What was achieved and how it meets the objectives.

12. Future Enhancements

Possible next steps, for example predictive routing, virtual agent, or extended integrations.

References

List documentation, courses and other sources in a consistent style.

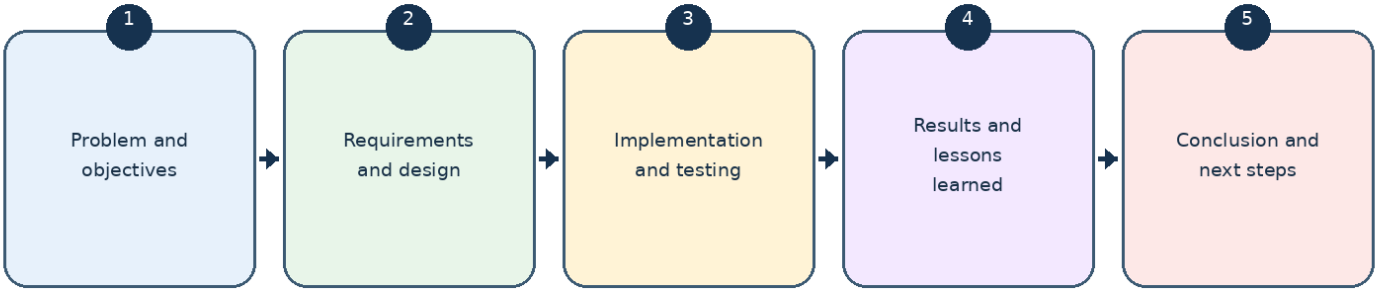

Appendices

Screenshots, scripts, update set details, test cases, user guide.

Process Diagram

Final Report

Incident Lifecycle Automation • Process diagram

Expected output: a traceable, testable process with clear ownership and documented outcomes.
